

THE GEM ADHESIVE

SECURE IT. SCULPT IT. CREATE WITH IT.

More Than an Adhesive.

The Gem Adhesive by Tayla-Made Nail Co is more than an adhesive.

Designed for securing gems, crystals, charms and nail art accessories, its thick, controlled consistency provides the hold and precision needed to position embellishments exactly where you want them - without the product running away from you.

But that's only one way to use it.

The thick, mouldable consistency of The Gem Adhesive also allows nail techs to create raised and dimensional 3D nail art, giving you the freedom to sculpt texture and detail directly onto the nail.

Use the precision nozzle directly from the tube for controlled placement, or dispense a small amount onto a palette and work with your preferred nail art brush or tool.

Secure. Sculpt. Create. One product designed to give you greater control over detailed nail art.

1 SECURE Strong adhesion for gems, crystals, rhinestones, charms and accessories.	2 SCULPT Thick, mouldable gel for raised and dimensional 3D nail art.	3 CREATE Build lines, swirls, droplets, textures and other sculpted effects.
4 PRECISION NOZZLE Dispense product exactly where it is required.	5 PALETTE FRIENDLY Use with a brush, dotting tool, silicone tool or other suitable nail art tool.	6 60-SECOND CURE Complete cure under a compatible UV/LED nail lamp.

MORE THAN A GEM ADHESIVE

The name may say Gem Adhesive, but its uses go well beyond simply attaching crystals.

The Gem Adhesive can be used for: Gems • Crystals • Rhinestones • Charms • Nail art accessories • Raised detailing • Textured designs • 3D nail art • Sculpted gel designs

Its thick consistency means the product stays where you place it, giving you time to position an embellishment or manipulate the gel into your desired design before curing.

Unlike a thinner gel that can spread or run, The Gem Adhesive gives you the control needed when precision matters.

SERIOUS HOLD FOR SERIOUS NAIL ART

BECAUSE YOUR GEMS SHOULD STAY WHERE YOU PUT THEM

Creating a beautiful embellished nail is only half the job. Keeping everything securely in place matters just as much.

The Gem Adhesive has been designed with strong adhesion and a thick, controlled consistency to securely hold gems, crystals, rhinestones, charms and other compatible nail art accessories.

Its consistency allows the adhesive to sit around the base of an embellishment, helping create secure contact without the product immediately flowing away from where it has been placed.

From a single delicate crystal to a statement cluster, you control exactly how much adhesive you use and exactly where it goes.

BUILT FOR 3D NAIL ART

DON'T JUST ATTACH - CREATE.

One of the most versatile features of The Gem Adhesive is its ability to be used for dimensional nail art.

Its thick, mouldable consistency allows you to manipulate the gel before curing, making it possible to create raised lines, swirls, droplets, textures and other sculpted effects.

Dispense a small amount onto your palette and use your preferred nail art brush or tool to manipulate the product into your desired design.

Once you're happy with the shape and placement, cure for the complete 60 seconds to set the design.

Nail art that doesn't just have colour - it has dimension.

CREATE TEXTURE WITH CHROME

The Gem Adhesive also opens up another creative possibility when creating raised designs - chrome detailing.

Create your dimensional design using The Gem Adhesive and cure completely for 60 seconds. You can then incorporate compatible chrome products and finishing techniques according to the effect you are creating.

This can be used to create metallic-looking raised lines, swirls and textured effects that stand above the nail surface.

Instead of simply painting a design onto the nail, you can build the design first and then transform its finish.

PRECISION STRAIGHT FROM THE TUBE

PUT THE PRODUCT WHERE YOU WANT IT

The Gem Adhesive is packaged in a 15g tube with a precision nozzle, giving you direct control over product placement.

For gem and crystal application, the nozzle allows you to dispense small amounts exactly where they are required.

This helps: Control the amount of product used • Reduce unnecessary excess • Target specific areas • Work around detailed designs • Place adhesive between existing embellishments • Keep application controlled and precise

Less mess. Less waste. More control.

OR USE IT FROM A PALETTE

The precision nozzle isn't your only option.

For detailed nail art or when you prefer working with a brush or tool, simply dispense a small amount of The Gem Adhesive onto a clean nail art tile or palette.

You can then pick up and manipulate the product using your preferred nail art brush, detail brush, dotting tool, silicone tool or other suitable nail art tool.

This makes it easy to adapt your application technique according to the design you are creating.

Use the nozzle when you want placement. Use your tools when you want artistry.

WHY CONSISTENCY MATTERS

THICK ENOUGH TO STAY WHERE YOU PUT IT

The Gem Adhesive is intentionally thick. For this type of product, that's exactly what you want.

When securing an embellishment or creating dimensional nail art, a thin gel can move away from the area where you have placed it.

The Gem Adhesive's thick, controlled consistency gives you greater control. It allows the product to stay where it is placed, support gems and embellishments during positioning, hold raised shapes before curing, be manipulated into dimensional designs and provide controlled application without unnecessary running.

This makes the consistency part of the performance of the product - not simply a texture.

HOW TO USE - GEMS, CRYSTALS & CHARMS

1

COMPLETE YOUR NAIL

Complete your chosen Tayla-Made colour application and finish the underlying nail surface according to the design you are creating before securing the embellishment. Avoid unnecessarily coating over the visible surface of crystals or gems, as this can dull their facets and reduce their reflective finish.

2

APPLY THE GEM ADHESIVE

Using the precision nozzle, dispense an appropriate amount of The Gem Adhesive exactly where your embellishment will be positioned. Alternatively, dispense a small amount onto a palette and apply using your preferred nail art brush or tool.

3

POSITION

Place your gem, crystal, rhinestone or charm into the adhesive. Gently position the embellishment until you are happy with its placement. Ensure there is sufficient contact between the embellishment and adhesive without unnecessarily covering the decorative surface.

4

CURE

Once correctly positioned, cure The Gem Adhesive for 60 seconds under a compatible UV/LED nail lamp.

5

CHECK

Check that the embellishment is securely held before completing the service.

HOW TO USE - 3D NAIL ART

1

PREPARE YOUR PRODUCT

Dispense a small amount of The Gem Adhesive onto a clean nail art tile or palette.

2

CHOOSE YOUR TOOL

Select the brush or nail art tool appropriate for the design you are creating.

3

CREATE YOUR DESIGN

Pick up a small amount of product and manipulate it into your desired raised design. Create lines, curves, droplets, textures or other dimensional details. Because the product is thick and controlled, you have time to refine the design before curing.

4

CURE

Once you are satisfied with the design, cure for 60 seconds under a compatible UV/LED nail lamp.

5

FINISH

Leave the design as created or continue with your chosen compatible nail art finish, such as chrome, according to the effect you are creating.

HOW MUCH PRODUCT SHOULD YOU USE?

ENOUGH TO HOLD - NOT ENOUGH TO FLOOD

More adhesive doesn't automatically mean better adhesion.

The goal is to use enough product to create secure contact between the embellishment and the nail without flooding the surrounding area.

The amount required will vary depending on the size, shape and underside of the embellishment you are applying. A small flat-backed crystal will require considerably less product than a larger or more dimensional charm.

Start with a controlled amount. Position the embellishment. Then assess whether additional product is required.

Controlled application gives you a cleaner result.

HEMA FREE & TPO FREE

The Gem Adhesive is formulated HEMA Free and TPO Free, consistent with the Tayla-Made Nail Co gel system.

As with all professional UV/LED gel products, avoid contact with the skin and surrounding tissue and ensure the product receives its complete required cure.

WHY YOU'LL LOVE IT

• Designed for gems, crystals and rhinestones	• Suitable for charms and nail art accessories
• Creates raised and dimensional 3D nail art	• Thick, controlled consistency
• Strong adhesion	• Holds its shape before curing
• Precision nozzle for controlled placement	• Can be dispensed onto a palette for brush or tool application
• Helps minimise unnecessary product waste	• Suitable for detailed and textured nail art
• Can be incorporated into chrome nail art designs	• HEMA Free

• TPO Free	• UV/LED curable
• 60-second cure	• Convenient 15g tube
• Professional nail art essential	

PROFESSIONAL TIPS

SECURE AROUND IT - DON'T BURY IT.

When securing gems and crystals, you don't need to completely cover the embellishment in adhesive. Place enough product underneath and around the base to create secure contact while keeping the visible surface of the crystal clean. This helps maintain the clarity, facets and reflective finish that make the embellishment stand out in the first place.

Secure the gem. Don't hide it.

BUILD YOUR DESIGN BEFORE YOU CURE.

The Gem Adhesive doesn't cure until you put it under your UV/LED lamp. Use that working time. When creating dimensional nail art, manipulate the gel until you are happy with the height, shape and placement of your design. Look at the nail from different angles before curing.

Once you are happy: cure for the complete 60 seconds and lock it in.

AT A GLANCE

Product	The Gem Adhesive
Product Type	Gem Adhesive + 3D Nail Art Gel
Primary Uses	Gems, crystals, rhinestones, charms, nail art accessories and dimensional 3D designs
Colour	Clear
Consistency	Thick and controlled
Application	Precision nozzle or nail art brush/tool
Size	15g
Packaging	Precision application tube
Formula	HEMA Free & TPO Free
UV/LED Cure Required	Yes
Cure Time	60 seconds
Best For	Securing nail art embellishments and creating raised, dimensional nail art
